

I am a professional truckdriver, with over 2 million safe miles on the road. For once in America, we now have a service that can give us weather and traffic information in many metro cities across the nation. As a driver my time is valuable and if there is any way I can find out about traffic and weather problems so that I can save time by rerouting my trip to avoid congested traffic or bad weather, I do so. This service that the National Broadcasting Assoc wants to take away from us is of great value to me, the truckdriver. I live in the metro Atlanta area and the traffic can be unbearable here and to know how to avoid the problems is a great service. I support XM Satellite Radio. Please keep the Traffic and Weather Service they offer.
